(54) Title: SOLID PHASE EXTRACTION METHOD FOR OBTAINING HIGH-PURITY UNSATURATED COMPOUNDS OR  
DERIVATIVES OF SAID COMPOUNDS

WO 02/098826 A2 (54) Bezeichnung: FESTPHASEN-EXTRAKTIONSVERFAHREN ZUR GEWINNUNG VON HOCHREINEN UNGESÄTTIG-  
TEN VERBINDUNGEN BZW. DERIVATE DIESER VERBINDUNGEN

(57) Abstract: The invention relates to a novel extraction method for obtaining at least one unsaturated, optionally derivatised com-  
pound, from mixtures of said compounds with other less saturated constituents, e.g. for obtaining polyunsaturated fatty acids or  
the derivatives thereof from mixtures with saturated and/or less unsaturated, optionally derivatised fatty acids, by means of selective  
complexation with a cation exchanger which is partially or fully charged with silver ions, and subsequent decomplexation.

(57) Zusammenfassung: Die vorliegende Erfindung betrifft ein neuartiges Extraktionsverfahren zum Gewinnen einer oder mehrerer  
ungesättigter, gegebenenfalls derivatisierter Verbindungen aus Gemischen von diesen mit anderen weniger stark gesättigten Kom-  
ponenten, z.B. die Gewinnung von mehrfach ungesättigten Fettsäuren oder deren Derivate aus Gemischen mit gesättigten und/oder  
weniger stark ungesättigten, gegebenenfalls derivatisierten Fettsäuren, durch selektive Komplexierung an einen partiell oder voll-  
ständig mit Silberionen beladenen Kationentauscher und anschließender Dekomplexierung.

(54) PPAR ACTIVATOR

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a peroxisome proliferator activated receptor(PPAR) activator useful as a prophylactic or an ameliorating agent for diabetes or obesity because the activator has excellent PPAR activating actions and high safety even when ingested over a long period.

SOLUTION: This PPAR activator comprises a monoacylglycerol.

## (54) TONER TRANSFERRING DEVICE

## (57)Abstract:

**PROBLEM TO BE SOLVED:** To prevent the deterioration of image quality by enhancing transfer efficiency at the time of transferring a toner image formed on a photosensitive substance to an intermediate transfer belt.

**SOLUTION:** The intermediate transfer belt 5 is laid around three rollers 5-5c and is brought into contact with a photosensitive substance belt 3 between the rollers 5a and 5b in order to transfer the toner image formed on the photosensitive substance belt 3 to the intermediate transfer belt 5. Transfer rollers 6a and 6b in which at least two rollers are arranged at a specified interval are provided in order to sufficiently secure a contact area with the photosensitive substance belt 3, so that the contact area is secured between contact P1 and P2 of the intermediate transfer belt 5 with the photosensitive substance belt 3, and stabilized transfer potential having a specified width is secured by supplying the same voltage to the transfer rollers 6a and 6b and the transfer efficiency is improved.
